

ISO 14001:2015/Amd 1:2024 Test of Understanding Level 2 – Professional

Test Syllabus

The main purpose of the ISTO Test of Understanding (the “Test”) is to offer an evidence-based qualification to professionals who have demonstrated an appreciation of the intent and an accurate understanding of the requirements (and the non-requirements) of the standard, including its applicability and underlying management principles. Such knowledge and skills are crucial in providing a value-adding service related to the standard, be it implementation, advisory or auditing.

The Test of Understanding is not an auditor qualification. There are no questions directly related to auditing.

The topics set out in 1.1 to 1.3 are not intended to limit the subject matter or be all inclusive of what might be covered in the Test. Candidates will be expected to apply their knowledge to organizations with different sizes and complexity.

1.1. Applicability (A)

- ISO 14001 purpose
- ISO 14001 intended outcomes
- Scope and boundaries of an environmental management system

1.2. Concepts, principles and Terminologies (Co, T)

Environmental

- Environmental aspects and impacts, significant environmental aspects of activities, products and services
(*E.g. Emissions to air; releases to water; releases to land; use of raw materials*)
- Life cycle considerations; abnormal conditions and emergency situations
- Commonly known legal requirements relevant to a sector
(*E.g. Noise permits, BOD (Biochemical oxygen demand), COD (Chemical oxygen demand) and E. Coli levels in sewage discharge*)
- Typical measurement of environmental performance
(*E.g. Resource consumed per unit of output, waste generated per unit of output, Waste reduction, carbon footprint, energy efficiency, water efficiency*)

ISO 14001 Clause 3 Terms and definitions

- Terms related to organization and leadership
(*E.g. top management*)
- Terms related to planning
(*E.g. environment, compliance obligations*)
- Terms related to support and operation
(*E.g. documented information, outsource, life cycle*)
- Terms related to performance evaluation and improvement
(*E.g. nonconformity, corrective action, continual improvement, effectiveness*)

Management Systems

- Risk-based thinking
- The hierarchy and interrelationship of documented information within the management system, as well as the associated risks
- Root cause analysis and simple analytical tools such as Pareto chart
- The application of the Plan-Do-Check-Act cycle within the management system
- Typical measurements of management system performance
(*E.g. Training hours; achievement of objectives, improvements achieved; number of nonconformities*)

ISO 14001 EMS requirements structure

- Interrelationship between leadership and commitment, policy, objectives, planning, resources, operations, monitoring and measurement, analysis and evaluation and continual improvement
- Sequence of activities in the requirements of the standard

1.3. Clause reference, Requirements and Unspecified requirements (C, U, R, Ac, E)

Clause Reference (C)

- Identify the clause reference of a particular ISO 14001 requirement.
(*E.g. The requirement to determine competence is given in clause 7.2a.*)

Requirements versus Unspecified requirements (R, U)

- Requirements specified in the ISO 14001 standard
(*E.g. Conduct management review*)
- Differentiate from non-requirements
(*E.g. Clause 5.1 does not require a strategic plan; Clause 6.1 does not require a formal method for risk management.*)

Key requirements of the ISO 14001 EMS: Management System related

Planning

- Context, interested parties' requirements, risks/opportunities; consideration of climate change
- Leadership and commitment
- Environmental policy, objectives and actions to achieve
- Roles, responsibilities and authorities

Performance evaluation and improvement

- Monitoring and measurement
- Monitoring and measuring equipment control
- Evaluation of compliance
- Analysis and evaluation
- Internal audit
- Management review
- Corrective action
- Improvement
- Management system non-requirements

Key requirements of the ISO 14001 EMS: Operations related

Planning

- Environmental aspects and significant environmental aspects of activities, products and services, considering life cycle, take into account changes, abnormal conditions and emergency situations
- Compliance obligations
- Actions to address environmental aspects, compliance obligations and risks and opportunities

Support

- Resources
- Competence and awareness
- Communication
- Documented information creation and control, and to maintain and retain

Operation

- Operational planning & control
- Outsource process control
- Emergency preparedness and response
- Support and operational non-requirements

Actual documented information requirements versus Erroneous Requirements (Ac, E)

In order to provide flexibility to organizations of different sizes and background, ISO 14001 is written with minimal documentation requirements. Based on their contextual factors, organization shall determine the complexity of their documented information required to support their environmental management system.

- Requirements specified in the ISO 14001 standard
(*E.g. competence documented information*)
- Differentiate from non-documentation requirements
(*E.g. management system manual; documented procedure; approved supplier list*)
